

# ***EE Systems adds false alarm reduction module***

EE Systems Group introduces the eFAR100, an electronic false alarm reduction module, developed to be fully compatible with standard alarm control panels, expanders and PIR sensors.

The product's digital verification control technology is designed to eliminate more than 90 percent of false alarms caused by PIR sensors without appreciable degradation in

intrusion detection performance.

Features include T-tap hook up, and improved system immunity to ESD, EFT and AC induction, auto configuration without programming, built-in fail safe diagnostics, support for all loop supervision types.
