1 eLEDing™/EE845ESL by EE Systems Group, Inc.

eLEDing/EE845ESL is a high intensity solar powered lighting system designed to work with the environment. It conforms to most lighting and illumination needs for CCTV, security, and safety enhancements. The product also functions as an emergency or back up light during AC power outages.

EE845ESL can be used indoors (hallways, stairways, emergency exits, etc.) and outdoors (any dark area that lack an AC power source), complete with weather proofing, for all types of commercial and industrial applications. The system includes a solar charger board (10V/2.5W), rechargeable lithium polymer battery (7.4VDC, 3AHRs) that uses benign and nontoxic materials, a bright LED matrix (comprised of 45 pieces) light with built in motion sensor, and an optional plastic base stand.

EE845ESL has a 180° sensing angle, a detecting range of up to 40'x40', up to five hours of continuous illumination time, an operating
